

Uniblitz® NS25B

25mm Bi-Stable Optical Shutter

Overview

The Uniblitz NS25B is a 25mm-aperture bi-stable optical shutter utilizing our patented N-CAS® technology. The NS25B's simple design provides maximum clearance around the aperture, and a machined flat surface makes for its easy integration into virtually any system. The NS25B has an overall diameter of 2.250 inches, and an electronic synchronization is available. Bi-stable shutter devices, like the NS25B, require no power to hold the blades in either the open or closed state.

Shutter Timing Data

¹ Under no circumstances should any type of lubricant be applied to the shutter blade area. Lubricating the shutter blades will likely slow the shutter down and may eventually render it inoperable.

³ Input side only; Teflon® coating is on opposite side to protect shutter blade surface. Light source must be input to the reflective side only.

Electronic Sync.

The synchronization system for NS shutter devices incorporates a small magnet mounted to the driving mechanism and a Hall effect sensor. When the device achieves approximately 80% of full open, the magnet causes the Hall effect sensor to change state, producing a signal to indicate that the shutter has switched to the active state. Shown to the left is the NS series shutter schematic which incorporates the electronic synchronization system. **There is no connection to the designated synchronization pins when an electronic sync. is not selected.**
